Description

Set of sensors and autonomous monitoring stations, in compliance with W3C international standards, for data interoperability.

Uses and applications

Monitoring, predictive maintenance, optimisation of production systems, quality control.

Equipment classification

Demo units.

Associated services

- Proofs of concept for experimentation in technologies for Industry 4.0 through Blockchain.
- Proofs of concept for experimentation in technologies for rural areas.
- Proofs of concept for experimentation in technologies for Industry 4.0 through IoT, Interoperability and data sharing.
- Proofs of concept for experimentation in technologies for Industry 4.0 through advanced data analytics and Artificial Intelligence.
