Location
Escuela Politécnica de Ingeniería de Gijón
Edificio Departamental, número 4,
1ª planta. Laboratorio 4.1.09.
Campus Universitario de Gijón
33203, Gijón (Asturias)

Description
Servers used to carry out simulation and monitoring tasks, which are the base of most of the applications developed for companies.

Uses and applications
Many different applications associated with the analysis of large volumes of data to plan production, make productivity, automation and quality control predictions in industrial processes.

Equipment classification
Demo units.

Associated services
- Proof of concept for technologies to support energy management systems.
- Training in open source digital technologies for energy management systems.
- Training in open source IoT technologies for Smart Cities.

Equipment code
N2.34

Service code
E.6
F.1
F.2
